Technical Skills: JavaScript (ReactJS along with Redux Thunk), MySQL, HTML5/CSS 3, REST APIs and Java

PROJECTS WORKED ON

SafEarth Renewables, Bengaluru: **Front-End Developer**

Platform Title: SolarFlow(Solar Project Management Tool)

Description: SolarFlow is a Project Management tool specifically designed for the solar industry using the feedback and experience of over 200MW of solar plant execution. It allows for efficient management of solar projects and sets a standard for the entire lifecycle of a Solar plant, right from the inception to the completion of a Solar project.

Responsibilities:

- Key projects include Photos module, Custom Events, Customer Dashboard and Customer views, Vendor Dashboard, Project Planning module, Prompts, Tickets View, SafEarth Project Manager views and rights, SafEarth Sales Person views.
- Singlehandedly implemented the entire CRM (Customer Relationship Management) module which is to be used by the Sales department to ensure seamless tracking and management of day-to-day sales activities.
- Worked closely with the Backend Engineer to ensure accurate and seamless integration of new components with backend endpoints.
- Ensured modularity of new modules and code by developing reusable components, util functions and constants.
- Worked closely with the Graphic Designer to better understand the requirements and design specifications.
- Worked on multiple bug fixes and improvements.
- Implemented a guided tour of the application using React Joyride.
- Single Sign-On.

Platform Title: SafEarth Auction Platform (Project Marketplace)

- Landing page V1 and V2 design implementations for both web and mobile versions.
- Worked on bug fixes and improvements.
- Onboarding workflows for Customers and Bidders.
- Auction hosting changes.
- Website and mobile page speed optimization.
- Vendor Admin Page.
- Successfully implemented a data dashboard for Bidders providing comprehensive insights into platform metrics.
- Single Sign-On and integration of the 3 platforms.
- Implemented a guided tour of the application using React Joyride.

Platform Title: SafEarth E-Commerce

- Landing page new design implementations for both web and mobile versions.
- Implemented Elastic Search using Reactive Search.
- Single Sign-On.
- Implemented a guided tour of the application using React Joyride.

Cerner HealthCare Solutions Pvt. Ltd., Bengaluru

Role: Software Engineer

Title: Transfer Center

Description: Transfer Center is a web application which assists in the transfer of patients from one hospital to another. It considerably reduces the time taken to transfer a patient and also facilitates the documentation of transfer related information and provides timely reports to care givers.

Responsibilities:

- Investigated and fixed multiple client reported defects ranging from Critical to High priority.
- Implemented a capability for the FirstNet PreArrival feature
- Worked on the Modify Display Name Project
- Worked on project releases

Role: Software Intern

Title: Impact Analyzer

Description: This application is beneficial for engineers who work extensively on CCL scripts. Currently there is an internal repository which they use to explore CCL scripts but have to manually scroll through each to understand the impacts.

Responsibilities: Developed a web application called Impact Analyzer for searching Cerner Command Language (CCL) Scripts and their impacts or subroutines using React and Java REST API.
